FlexITy Engineers One of Canada's Most Advanced Digital Hospitals: *Woodstock Hospital*

State-of-the-art network helps hospital facilitate patient care using the latest technologies

RICHMOND HILL, ON (December 15, 2011) – FlexITy, an award winning enterprise provider of Cloud Solutions, Unified Communications, Data Centre Technologies and Managed Services, today announced that Woodstock Hospital (WH) has successfully implemented the Cisco® Medical-Grade Network in its new facility, providing a highly resilient, innovative and economical solution to improving health services and advancing patient care.

Woodstock's newest facility officially opened its doors on November 20 and is excited to continue to fulfill its mandate to provide patients and staff with the highest-quality healing environment. Utilizing Cisco's MGN infrastructure platform, WH can leverage the latest patient care and communications technologies that facilitate and integrate diverse business and clinical communications between patients, administrators and partners in a highly secure environment.

“Woodstock Hospital is committed to its vision of providing first-class health care to our community. To fulfill our mandate, we need to be a leader in innovative, high-quality

services and keep a pulse on the latest healthcare tools and technology. The Cisco Medical-Grade Network offers the infrastructure we need to provide our staff with the equipment and information they need to facilitate patient care and deliver the best health services possible,” stated Natasa Veljovic, president and CEO, Woodstock Hospital.

Woodstock Hospital’s advanced IP network is the result of the careful collaboration between FlexITy Solutions, a Cisco Gold Certified and Master Unified Communications Specialized Partner, and EllisDon, a leading construction design firm who worked closely to optimize the design and implementation of the network, communications systems and integration of third-party applications.

The medical-grade network, which utilizes 802.11n wireless technology, is designed to provide bandwidth-intensive and multimedia-rich applications and information such as medical imaging, to medical staff throughout the facility, regardless of location - including the patient bedside. WH will benefit from multiple wired and wireless services across one Internet Protocol (IP) network supporting data, voice and video for the fast and easy exchange of information.

“The future of healthcare is fast evolving and Woodstock’s vision to steward the continuum of care and deliver excellence in healthcare based on patient centric services guided this project from day one “ observed Peter Stavropoulos, FlexITy’s Chief Executive. “Once again, we had the privilege to work with such a talented team at Woodstock and with our partners EllisDon and Cisco Systems, to deliver on the promise of this visionary facility – architecting and implementing one of the most comprehensive converged network and wireless solutions of its kind – supporting Woodstock’s Integrated Medical Systems both today and for years to come.”

About FlexITy

FlexITy Solutions Incorporated (FlexITy) is a leading provider of voice, data, and converged and managed services for businesses throughout Canada.
